

Decorative Concrete

ProLine Radiant's industry leading floor heating systems are ideal solutions for heating stained and decorative concrete floors. The heat cable is designed to withstand the stress of heavy concrete pours

and rigorous concrete installations. The heat cable warms the concrete slab safely and efficiently without affecting the color or stain of the decorative floor.

Snowmelt Systems

Exterior snow melting systems are some of the finest conveniences you can enjoy. Sit back and relax as snow and ice melt from your driveway, sidewalks, and steps. Energy-efficient electric snowmelt systems are designed to provide maintenance-free snow melting in concrete, asphalt, stone, brick paver surfaces and more.

Fully automated radiant snowmelt systems can be installed in a variety of applications, including: sidewalks, ramps, patios, porches, steps, driveways, loading docks, etc.

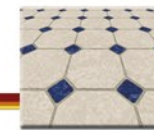

Roof Deicing

Roof deicing and gutter melt systems are one of the best investments you can make to protect your roof from snow and ice damage. Freeze-thaw conditions form dangerous ice dams and icicles that can cause structural damage and leaking to your roof. Snow accumulation creates heavy weight loads on roofs and are often dangerous and difficult to remove.

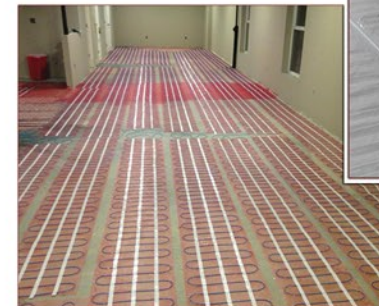

Fortunately, snow and ice can be cleared away with a well-designed roof deicing system. ProLine Radiant offers the highest quality roof heating systems available for all types of applications, including new construction, remodeling, and existing roofs.

Underfloor Heating

Radiant floor heat is comfortable, clean and energy efficient. The benefits of radiant floor heating systems make them an ideal solution for both new construction and remodeling projects. If you plan on heating your bathroom floors, basement or entire home, ProLine is the industry leader for custom designing affordable radiant heat systems to meet your project needs.

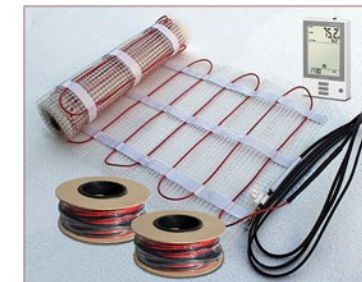

Underfloor radiant heat will add luxurious, comfortable and efficient warmth to your home or business.
